

ComeBack

A local-first, clinician-connected companion that turns the ICC Return to Play Post-Pregnancy Guidelines into a clear, measurable journey back to cricket.

For the player

One next step in her language, on her phone.

For the clinician

Movement observations, symptoms, and approval control.

For the ICC

A practical digital layer for a new Member-board framework.

A guideline cannot help if the daily journey is unclear.

The current gap

- The ICC framework is published as a nine-page PDF.
- Return support must be individualised across physical, psychological, social, and practical needs.
- Players and care teams need a shared view of actions, symptoms, and decisions.

“The guidelines serve as a template for Members, and strong support needs to be individualised to the specific needs of them and their family.”

Dr Philippa Inge, ICC Medical Advisory Committee

A simple loop that keeps clinical judgment in control.

1

Roadmap

The 6 Rs with cited guidance.

2

Observe

On-device camera metrics and symptom check-in.

3

Sync

Derived metrics only, with offline resilience.

4

Decide

Clinician approves or holds one stage.

Privacy

MediaPipe runs in a Web Worker. Camera frames are processed in memory and never stored or uploaded.

Safety

Symptoms block approval. AI explains cited content but cannot diagnose, clear, or modify a stage.

A working prototype, not a concept screen.

Frontend

- ✓ Installable GitHub Pages PWA
- ✓ Offline IndexedDB journey
- ✓ English, Bengali, Hindi, Urdu
- ✓ Accessible mobile-first UI

Intelligence

- ✓ Four pose-supported tests
- ✓ Deterministic 6 Rs rules
- ✓ Cited no-key explanation fallback
- ✓ Optional free Groq wording layer

Care connection

- ✓ Clinician queue and review
- ✓ Server-side symptom block
- ✓ Render/PostgreSQL Blueprint
- ✓ Signed red-flag webhook option

Verified locally: 59 unit/API tests, 12 mobile and desktop journeys, 100% rules coverage, and all files below 40 MB.

A pilot path for more supported returns.

Immediate value

- Players see a clear, translated next step.
- Clinicians retain approval authority.
- Member boards gain an auditable implementation layer.
- Offline and phone-first design broadens access.

Responsible pilot

1. Clinical and legal review.
2. One Member-board usability pilot.
3. Measure completion, clarity, accessibility, and clinician response.
4. Adapt for other sports only with sport-specific evidence.

ComeBack does not replace a care team. It helps the player and care team move through the same plan together.
